You think you're always on the run? Want to travel gentle, but still appear fashionable while shopping? And then, consider using a fantastic and incredibly inexpones... Category : computers & accessories > Laptops Brand : HP From : Walmart US Product : HP Pavilion 15-au020wm 15.6' Manhattan Gold Laptop Windows Intel Core i5-6200U Processor 8GB Memory 1TB Hard Drive If I didn't know better, I'd say HP has something to prove. At the beginning of this comments the ROUND-up HP sent over its X360 11T Touch Pavilion Select a beautiful car, and already one of our top recommendations in the under-\$500 range. And then, in the eleventh, eleventh hour, over the HP 15t Touch, which not only looks better, but works better too. HP is not playing. The design of the HP X360 Pavilion sent over was clearly meant to stand out with its bold red apple candy case. And the HP 15t Touch is clearly meant to stand out, simply not as outing. Here it is about subtle touches - a matte black finish with a weak diamond design that is almost soft to the touch. It is also should mention, an absolute magnet of fingerprints. Touch 15t looks fantastic fresh out of the package, but it's going to take some effort to keep it looking that way. The diamond motif continues once you open the lid, where you will immediately notice two-thirds of the hard plastic tray is embossed with the smallest diamonds. It almost looks like the tray has been drilled with diffuser or vents, except it is purely decorative working design. And in what's stylish. And then there's the trackpad, which is washed with the tray instead of embedded - and made of apparently the same matte material as the rest of the interior. The only sign is the trackpad is the lack of the familiar diamond pattern, plus the two physical mouse buttons located underneath. It's stylish - the type of trackpad you'd expect to find on a much more expensive car. Hp Schultz's Hp Pavilion 15t Touch is one of the stand out laptops here, but an absolute finger print magnet. She's not just a pretty face. This is one of the most responsive trackpads we've dealt with in the sub-\$500 range, although I'd recommend turning up sensitivity a bit. The hardest part is actually finding the trackpad. The trackpad is always so easily depressed in the tray, but not very much. And since it's the same material as the rest of your laptop, it can

be a little difficult to figure out where your hand needs to go in the dark. I think that's the price you pay for something so big. The keyboard is also top-of-the-line for this level. The keys are fun on touch 15t, with both an excellent click and a decent amount of travel. And in terms of design, I was impressed by both the slightly rough texture of keys and undervalued hp font used. Touch 15t is simply designed to look good. A pale screen is the only aspect of the 15t Touch design I find really lacking. Not only is the standard \$500-laptop resolution of 1366x768, but it's a 15.6-inch TN panel lackluster with a very poor color (despite WLED TECH HP touts). And while the viewing angles are of course better than the screens on the Toshiba C55-C or Acer E-15, it's a far cry from the IPS display on the X360 Pavilion. The panel also doubles as a touchscreen, although it was weak at tracking quick gestures and I finally opted on using-something that I'm fine with, as I hate fingerprints on the screen my, regardless. From the port point of view, 15t Touch is rock power, ethernet, a USB 3.0, a USB 2.0, HDMI, and audio jack on the left side, while the right has an additional additional USB an SD card reader and an optical drive. The left side is also equipped with a considerable ventilation grill, which unfortunately rotates up visibly hard at times. You could always snow it with 15t Touch's speakers, though. Although its cousin Pavilion x360's B&O branding is missing, the 15t Touch sound is respectfully powerful and clear. It has the same defect as the x360, although the main speakers are located on the bottom of the laptop, which means audio is perfectly fine on hard surfaces, but becomes muffled and granulated when placed on any soft surface (eg, a tour). Specifications like Pavilion x360, THE HP 15t Touch is pretty much neck-and-neck with the Dell Inspiron 15 5000 Series in terms of performance going. Unlike Pavilion x360, though, 15t Touch reference really doesn't tell the whole story. The x360 Pavilion is a perfect service machine, but a lot of reference performance comes from a zippy 128GB SSD drive-allowing it to apparently outperform Inspiron 15 5000, even if it's just packing a Core M-5Y10c processor. 15t Touch, on the other hand, outperforms Inspiron 15 5000 in certain tests because it is essentially Inspiron 15 5000. Just a little better. Under the hood, 15t Touch packs an Intel Core i3-5010U processor at 2.10GHz (compared to Inspiron 15 5000's i3-5005U at 2GHz). Apart from that, the Touch 15t and Inspiron 15 5000 are identical-integrated Intel HD 5500 graphics, 6GB of RAM, and a 5400 RPM hard drive (although the 15t Touch is only 750GB, unlike Inspiron 15 5000's 1TB drive). And no surprise, both machines proved very similar benchmark scores. In PCMark 8's Home Conventional Test 15t Touch scored 2159, which compares favorably to Dell's score of 2210 (though Toshiba C55-C outperforms both with a score of 2527). 15t Touch also outperforms Inspiron 15 5000 in conventional creative and conventional working tests, with scores of 2000 and 2485 at Inspiron's 1933 and 2436, respectively. Again, both are outplayed by toshiba car, with scores of 2198 and 2771. These are marginal differences, though, and Toshiba's car is nowhere near as sexy as either touch 15t or Inspiron 15 5000. And, importantly, Touch 15t performs favorably in our handbrake test too. Here we feed the car a 30GB MKV file in the Handbrake and ask it to transcode it to a 1GB-ish file. 15t Touch completed this task in 2 hours and 48 minutes, cut dell 2 hours and 55 minutes mark and manually beat Pavilion x360 for 3 hours and 43 minutes. All this to say 15t Touch is not just a good machine. There is a decent amount of spare power working hp of fantastic design. Rob SchultzThe balloon Unfortunately, the 15t Touch is as packed with useless/semi-useless software as the HP Pavilion x360. McAfee has set squat trights on 15t Touch as usual. As we recommend that you find a better antivirus (if you plan to run one). There's also the usual suite of HP programs in the first part, with HP Connected Drive and Connected Music leading the charge. But even worse is absolutely phenomenal amount of third-party HP applications filling their cars with. Our laptop review came uploaded down with Netflix, Dropbox, CyberLink Media Suite et al, WildTangent Games, SnapFish, Simple Solitaire, Microsoft Mahjong, Amazon, The Weather Channel, mysms, Evernote, and the most-confusing of all-Priceline and TripAdvisor. Like Pavilion x360, none of the things HP charges on these laptops seem harmful in itself. It's all from the names you know, it would be Netflix. But it's still nasty clutter on a brand new car. Verdict It's a tough call, but I'd say the HP 15t Touch is generally the best sub-\$500 laptop. Other laptops come close-Dell Inspiron 15 5000 and HP's own Pavilion x360 11T are both great all-around machines, and Toshiba Satellite C55-C obviously takes the crown performance. But damn it, 15t Touch is a gorgeous car. I was impressed by the 15t touch look as soon as I pulled it out of the box, and apart from its penchant for fingerprints I'm still impressed with it days later. And given that it has a great trackpad, fantastic keyboard, and specifications to support its stylish look? And you can find the model I reviewed for just \$430? I'm definitely comfortable saying Touch 15t is the best laptop I've got a look at this level. If HP got into this with something to prove, it turned out.
